PROFILE

Generalist Software Engineer with a strong track record of delivering MVPs, applications, and business-critical features under aggressive timelines. Comfortable working across different technologies, quickly adapting to new challenges, and taking ownership from idea to production. I thrive in fast-moving teams where execution, flexibility, and problem-solving are key.

PROJECTS

PT. Quantum Teknologi Nusantara

Jan 2022 - Now

1. Tech Lead at Nexiusai

AI-based assistant accounting platform that focuses on creating financial reports based on bank statements or excel file transaction data.

- Design and implement an OCR-based document validation pipeline for PDF and Excel files, including duplicate detection, data normalization, and automated account metadata extraction prior to analysis.
- Building an asynchronous distributed processing architecture using RabbitMQ and Celery to orchestrate workflows for data extraction, transaction classification, result validation, and financial report generation.
- Developing a transaction classification engine based on the Large Language Model (LLM) that is capable of parsing each line of account mutations and automatically mapping transactions to the Chart of Accounts (COA).
- Design a report processing state machine workflow with end-to-end status tracking, including ingestion, payment validation, data extraction, ambiguity resolution, report generation, and delivery.
- Integrating Midtrans Payment Gateway through webhook-driven architecture to automate payment validation, free-trial quota management, and triggering background processing after payment is successfully received.
- Developed an event-driven processing mechanism that automatically publishes jobs to RabbitMQ and distributes them to Celery workers to improve scalability and fault tolerance.
- Building a human-in-the-loop validation system that allows admins and partners to correct extraction results and complete transactions with low confidence scores or ambiguous classifications.
- Implement real-time processing notification using Server-Sent Events (SSE) to monitor report processing progress directly by users.
- Developing a financial report generation engine that produces Balance Sheet, Profit and Loss, and Cash Flow in PDF and multi-sheet Excel formats based on validated transaction classification results.
- Optimize report processing through background job execution and asynchronous task orchestration to reduce user wait time and increase system throughput.

2. Tech Lead at BSMR (Badan Sertifikasi Manajemen Risiko)

Web-based certification system for training providers, streamlining application, payment, and certification issuance processes.

- Developed a centralized logging system for all services, storing structured logs in Elasticsearch for monitoring and issue tracking.
- Deployed staging and production environments using Docker, ensuring isolated containers for backend services, MySQL, and Elasticsearch without version conflicts.
- Integrated payment features for certification applications, including invoice generation and payment proof uploads.
- Developed automated certification generation, producing official PDF certificates upon approval.
- Designed and implemented reporting features, displaying data in charts and tables with export options to PDF & XLSX.
- Implemented notifications to keep users updated on application status, payments, and certificate issuance.
- Implemented cron jobs for automated database backups on Ubuntu servers.

3. Full Stack Engineer at POLRI SuperApp

A comprehensive mobile application for the public to access Indonesian National Police services, including: SKCK, SIM, STNK, DUMAS, eSurvey, E-Tilang, SP2HP

- Developed a dynamic form builder with a drag-and-drop interface, enabling effortless form creation and data organization through a dashboard, deployed on both web and mobile applications.
- Implemented SKCK service integration with BPJS, ensuring seamless data verification and reducing manual input errors.
- Integrated identity verification with Dukcapil, improving authentication for both users and the admin monitoring dashboard.
- Developed a logging system for services, storing structured logs in Elasticsearch for monitoring and analysis.
- Implemented real-time helpdesk chat.
- Implemented push notifications using Firebase, keeping users updated in real time.

Available on: [App Store](#) & [Play Store](#)

4. Full Stack Engineer at Patroli Perintis

A web-based monitoring system for police patrol tracking, enabling officers to monitor outgoing patrols, track assigned special operations, analyze real-time movement and reports

- Implemented a police patrol tracking system, assigning specific routes and coordinates using Google Maps API, allowing real-time tracking and task allocation.
- Developed an SOS feature that connects users with the nearest police officer, providing real-time route tracking for immediate response.

5. Full Stack Engineer at Kenangan App

A unique e-commerce platform designed for seamless gift-giving, allowing users to send gifts without requiring the recipient's address, shop for various products, create celebration videos for special occasions such as weddings and birthdays

- Developed a dynamic homepage and shop page editor, allowing admins to customize the app's using a drag-and-drop interface.
- Built a web dashboard for monitoring transactions, product availability, and blocked content.
- Implemented a wishlist feature, enabling users to save desired products for future purchases.
- Developed a user-to-user blocking feature to enhance user privacy and security.

Available on: [App Store](#) & [Play Store](#)

EDUCATION

Bachelor of Computer Science

Sekolah Tinggi Teknologi Terpadu Nurul Fikri

Sept 2020 – Sept 2024

Jakarta, Indonesia

ORGANIZATION EXPERIENCE

Google Developer Student Club (GDSC) STT Terpadu Nurul Fikri

Dec 2022

– Aug 2023

- Organized and managed frontend team members, assigning tasks and responsibilities.
 - Led a 3-month bootcamp as an instructor, teaching frontend development concepts.
 - Speaker for the **Frontend Intermediate Workshop**, delivering insights and best practices
-

ADDITIONAL EXPERIENCE

Programming language

TypeScript, JavaScript, Dart, Python

Framework

Flask, NextJS, ReactJS, VueJS, ExpressJS, NestJS, Flutter

Database

MySQL, Elasticsearch, PostgreSQL, MongoDB

Others

Docker, AWS, GitHub, Figma, REST API, GraphQL, Rancher
